

Welcome to Server-side Web Development - TPWK16 - S17

(9 credits, in progress week 03-13)

In this course you'll learn how to create web applications producing dynamic web pages; different users visiting the same web page will not necessarily see the same thing, and some users will be allowed to do things other users won't be. You'll learn how to create web applications in ASP.NET MVC using C#, and how to store and retrieve data from an SQL Server database from your web application. You will also learn how you can deploy your web application and database and have them up and running on the Internet using Amazon Web Services. Although you will create your web application using ASP.NET, you will learn general patterns and principles that applies to most web frameworks, so after the course it will hopefully not be that hard for you to learn other ways to implement web applications.

Contact information - teachers

Anders Carstensen, course coordinator, examiner, anders.carstensen@ju.se, tel. 036-101586, room E2420

Peter Larsson-Green, Lecturer, Supervisor, peter.larsson-green@ju.se, tel. 036-101735, room E3408

Magnus Schoultz, Supervisor, magnus.schoultz@ju.se, tel. 036-101579, room E3421
