

# Lab 10 – Finding errors in your code.

## Problem to solve

Your application is supposed to remove all instances of the letter **s** from any word you type in the textfield and show the result in a div tag below. Unfortunately, your code contains bugs. Find them and fix them using the developer tools in Chrome (or another browser).

1. Download *Lab\_10\_files.zip* and extract the files.
2. Open *buggy.html* in Chrome and open up the developer tools (Mac) Cmd + Option + I or (PC) Ctrl + Shift + I
3. What the application is supposed to do:
  - a. If you leave the textfield blank and press the button, the input textfield's placeholder attribute should be "Type a word here"
  - b. If you type *Mississippi* and press the button, the div element below should say *Miiippi*

An overview of the debugger in Chrome can be found at <https://slides.com/jkohlin/debug>

For a complete guide on the developer tools in Chrome go to <https://developers.google.com/web/tools/chrome-devtools/javascript/reference#stepping>

No star level and no hand-in for this workshop (lab).
