Lab 2

Problem to solve
JavaScript is lacking some useful math tools, I want you to create them. Create these function in a script tag inside an HTML page:

plus(3,2)   The function should return the sum of the two numbers
minus(5,4)   The function should return the first number minus the second number
times(2,3)   The function should return the product of the two numbers
divide(12,3) The function should return the first number divided by the second number

The functions should be called from the console.

⭐

Star level
Instead of creating four functions create one function that can do + - * and / .

To get the extra point, your solution must work and be handed in before Monday[1] w.5
Add a comment to the upload "aiming for a star".

Upload your solution
Write your JS code in a script tag in an HTML page.
Name your file *Lab2-firstname_lastname.html*
Upload it on pingpong.

---

[1] Tuesday if your lab is on Wednesday, Wednesday if the lab is on Thursday.
