Welcome to Web Development with JavaScript and DOM

In this course you'll learn different programming languages and browser interfaces for building web pages, such as HTML, CSS, JavaScript & DOM. Traditionally, web pages have only been used on the web to distribute information, but today, they're also used to build cross platform desktop applications, smartphone applications and games. Many programmers find JavaScript such a nice programming language that they even implement their web applications (running on the server) in it.

In the *Documents* section to the left, you'll find the specification for the course in the file syllabus.pdf. This year's implementation of the course (teachers, teching events, examination tests, etc.) is described in the file study-guide.pdf. If you have any question about the course, you will most likely find you answer in that file, otherwise, just email your question to the coordinator at Peter.Larsson-Green@ju.se.

Teachers

Peter Larsson-Green
Examiner, Course Coordinator & Lecturer
Peter.Larsson-Green@ju.se

Anders Carstensen
Lab Supervisior
Anders.Carstensen@ju.se

Magnus Schoultz
Lab Supervisior
Magnus.Schoultz@ju.se
